

FOODEX

Problem:

Whenever we want to eat food from the canteen, we need to go to the canteen, place the order and then wait after placing the order.

This is incredibly annoying when we are hungry and we need food immediately as we still have to wait even after reaching.

Our hack:

We give users an option to order from the app so that by the time they reach, their order is ready.

➤ **Features:-**

<For Users>

- **Saves time**
- **No need to be physically present at the time of placing the order**
- **Tells you exactly when to reach so that the order is already available**

<For Vendor>

- **More customers.**
- **Easy analysis of daily, weekly and monthly sales.**
- **Easy Management of Sales.**
- **No customers leave or create disturbance for vendors because of long waiting times.**

➤ **Technology used:**

- **HTML**

- CSS
- MySql
- PHP
- Bootstrap
- JavaScript
- JQuery
